AMAZON

Global Sales Performance & Profitability Analysis

Excel Dashboard · Data-Driven Insights · 2024–2025

$629.1M	$186.7M	10,000	34.97%
Total Revenue	Total Profit	Orders	Profit Margin

Prepared by: Data Analytics Team | Tool: Microsoft Excel

Dataset: 10,000 Orders | Regions: Asia-Pacific, Europe, North America

■ Executive Summary

This report presents a comprehensive analysis of Amazon's global sales dataset comprising **10,000 orders** across multiple regions, categories, and customer segments. Using Excel PivotTables, PivotCharts, Slicers, and advanced formulas, key patterns were identified in revenue generation, profitability, operational efficiency, and customer behavior.

The analysis spans **2024–2025** covering 8 countries, 4 product categories, 5 sub-categories, 3 warehouses, 3 payment methods, 2 customer segments, and 3 delivery statuses.

Objective	Analysis Area
Revenue Intelligence	Revenue by Region, Country, Category, Sub-Category
Profitability Analysis	Profit Margins, Quarterly Trends, Category Breakdown
Customer Behavior	Segments, Gender, Payment Preferences, Order Priority
Operational KPIs	Delivery Performance, Warehouse Efficiency, Return Rates
Discount Strategy	Impact of Discount Bands on Net Revenue & Profitability

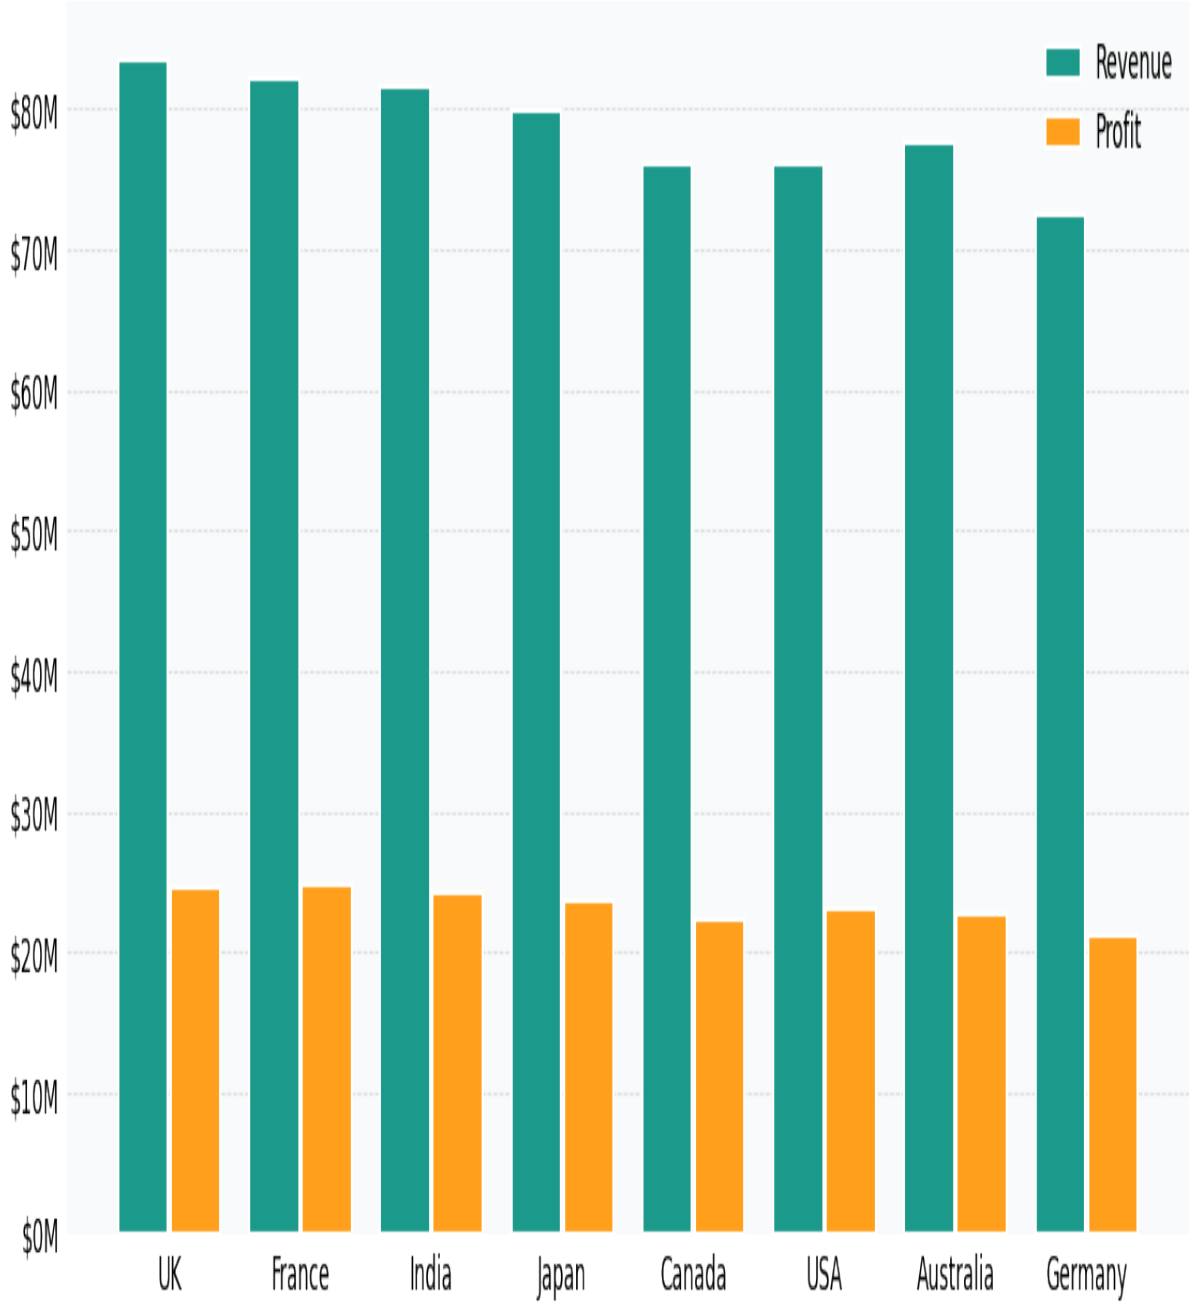
■ Key Performance Indicators (KPI)

Total Revenue	Net Revenue	Total Profit	Total Cost	Units Sold
$629.1M	**$534.5M**	**$186.7M**	**$347.8M**	**2,485,804**
Total Orders	Avg Profit Margin	Avg Delivery	Avg Rating	Return Rate
10,000	**34.97%**	**4.97 days**	**2.99 / 5**	**50.09%**

■ ***Insight:*** *Total revenue of $629.1M was generated from 10,000 orders with an average profit margin of 34.97%. The business maintains healthy profitability despite a 50.09% return rate, suggesting strong gross margins that absorb return costs.*

■ Revenue & Profit by Country

UK leads with the highest revenue ($83.5M), closely followed by France ($82.1M) and India ($81.6M). Germany shows the lowest revenue ($72.5M) but competitive profit margins across all markets remain consistent.



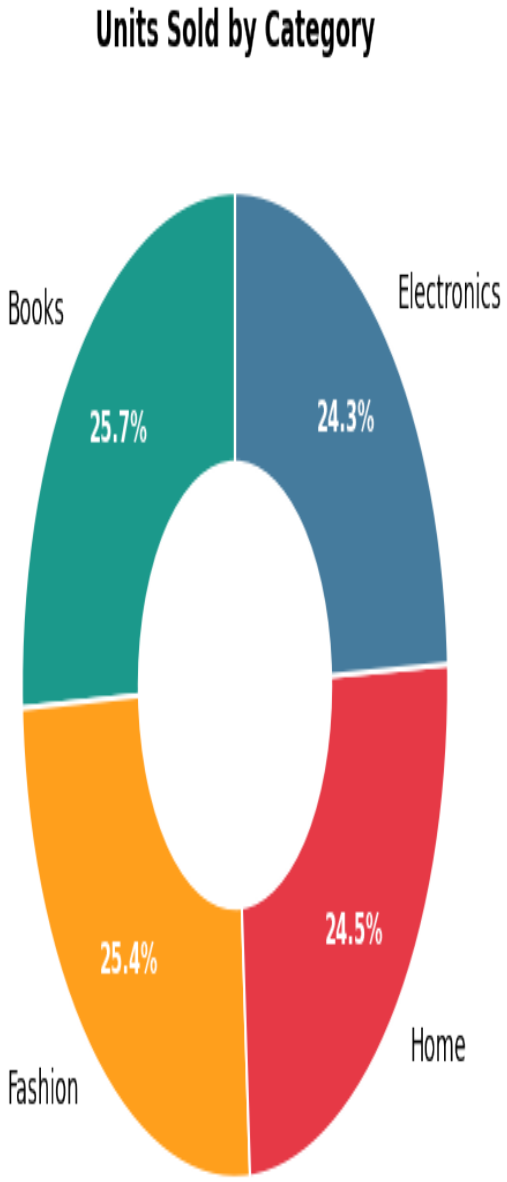
Country	Revenue	Profit	Margin
UK	$83.50M	$24.64M	29.5%
France	$82.12M	$24.79M	30.2%
India	$81.59M	$24.19M	29.7%
Japan	$79.75M	$23.61M	29.6%

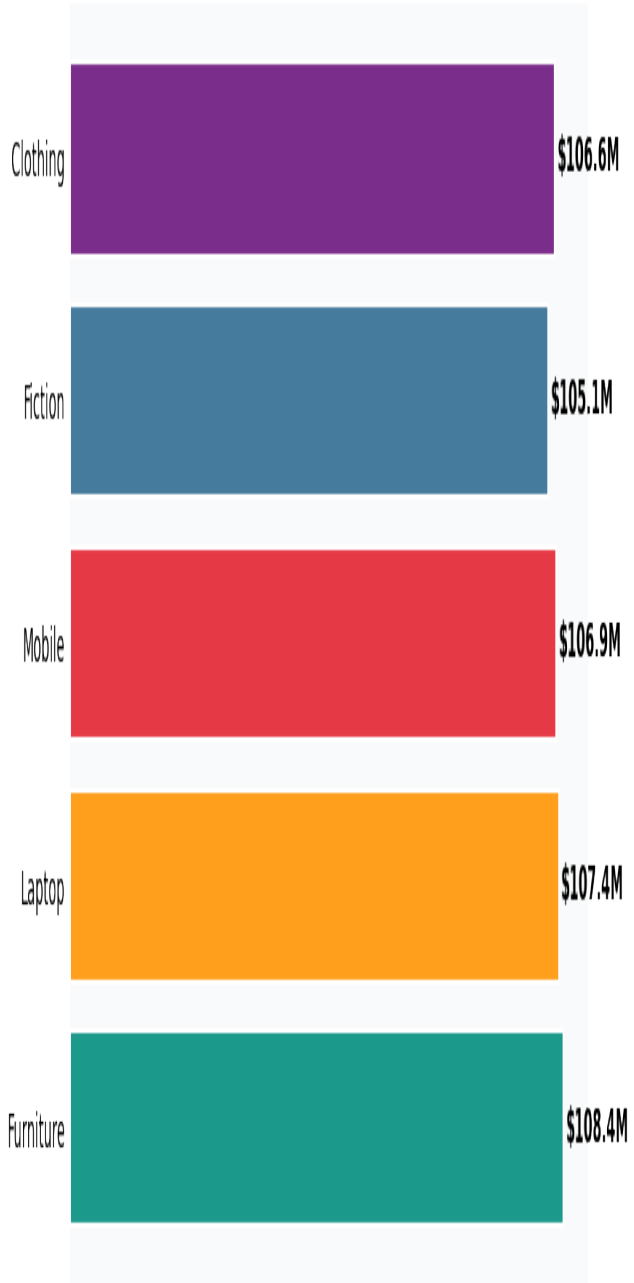
Australia	$77.60M	$22.77M	29.3%
USA	$75.98M	$23.12M	30.4%
Canada	$76.11M	$22.37M	29.4%
Germany	$72.46M	$21.21M	29.3%

■ ***Insight:*** *UK is the top revenue market at $83.5M. France leads on profit margin at 30.2%. All 8 markets show resilient double-digit profit margins (29–30%), indicating balanced global performance.*

■ Sales & Profit by Category

Four product categories were analyzed: Books, Fashion, Home, and Electronics. Fashion leads on profit ($48.1M) while Books leads on units sold (639,993). All categories demonstrate strong volume and healthy profit contributions.



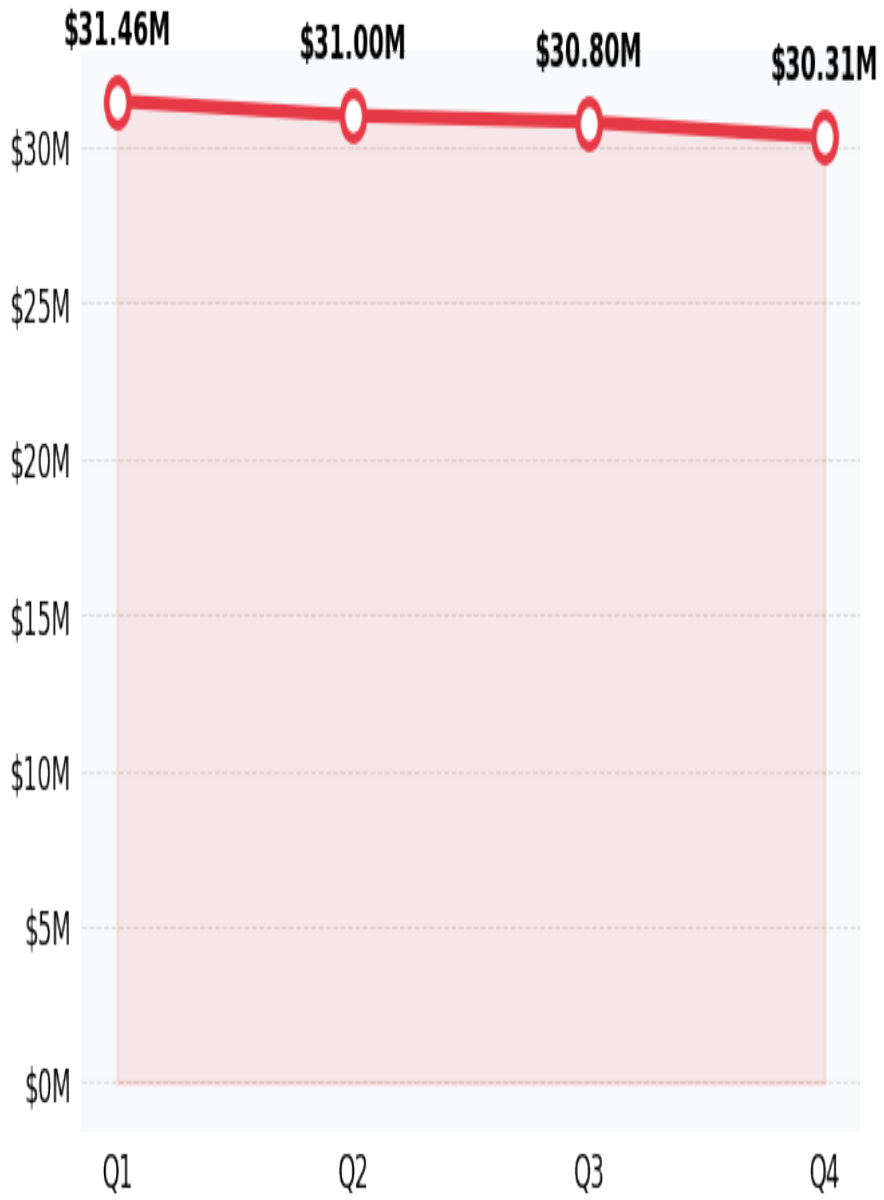


Category	Units Sold	Profit ($M)	% of Total Profit
Books	639,993	$48.02M	25.7%
Fashion	630,876	$48.10M	25.8%
Home	610,258	$45.80M	24.5%
Electronics	604,677	$44.80M	24.0%

■ ***Insight:*** *Fashion is the most profitable category (25.8% of total profit), though all 4 categories are nearly evenly distributed — indicating a well-diversified product portfolio. Furniture sub-category leads in Net Revenue at $108.4M.*

■ Quarterly Profit Trend

Quarterly profit analysis reveals a gradual declining trend from Q1 ($31.5M) to Q4 ($30.3M), a 3.7% decrease over the year. However, all quarters remain above the $30M mark, demonstrating stable profitability.

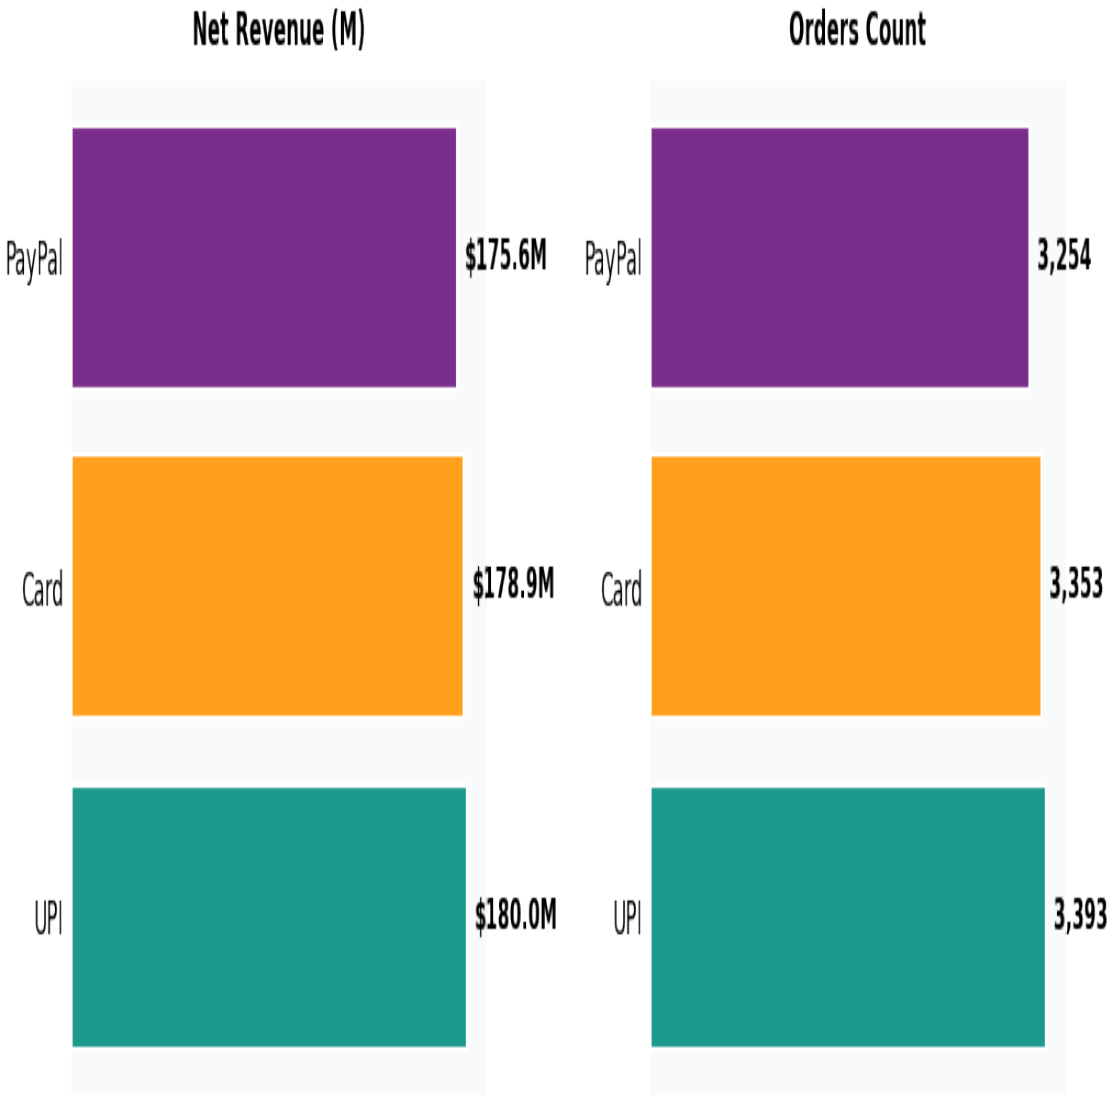


Quarter	Profit	vs Q1
Q1	$31.46M	—
Q2	$31.00M	-1.5%
Q3	$30.80M	-2.1%
Q4	$30.31M	-3.7%

■ ***Insight:*** *Quarterly profits are declining slightly — a seasonal investigation is recommended. Q1 may benefit from new-year shopping spikes; strategies to boost Q4 performance should be explored.*

■ Payment Method Analysis

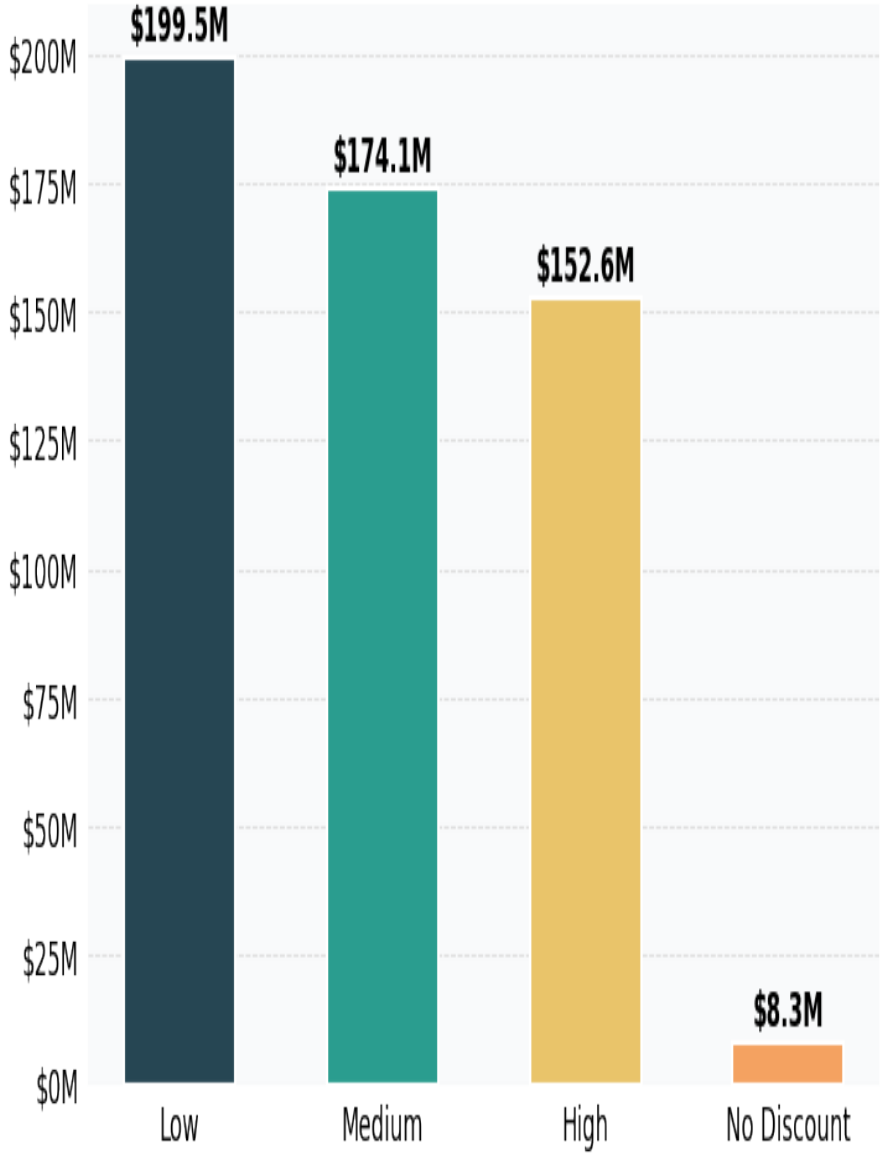
UPI leads in both net revenue ($180M) and order count (3,393), followed closely by Card and PayPal. The even distribution suggests customers have diverse payment preferences.



> ■ ***Insight:*** *UPI is the preferred payment method with the highest revenue ($180M) and 33.93% of orders. All three methods show balanced adoption — offering all three options is a strong retention strategy.*

■■ Discount Impact on Revenue

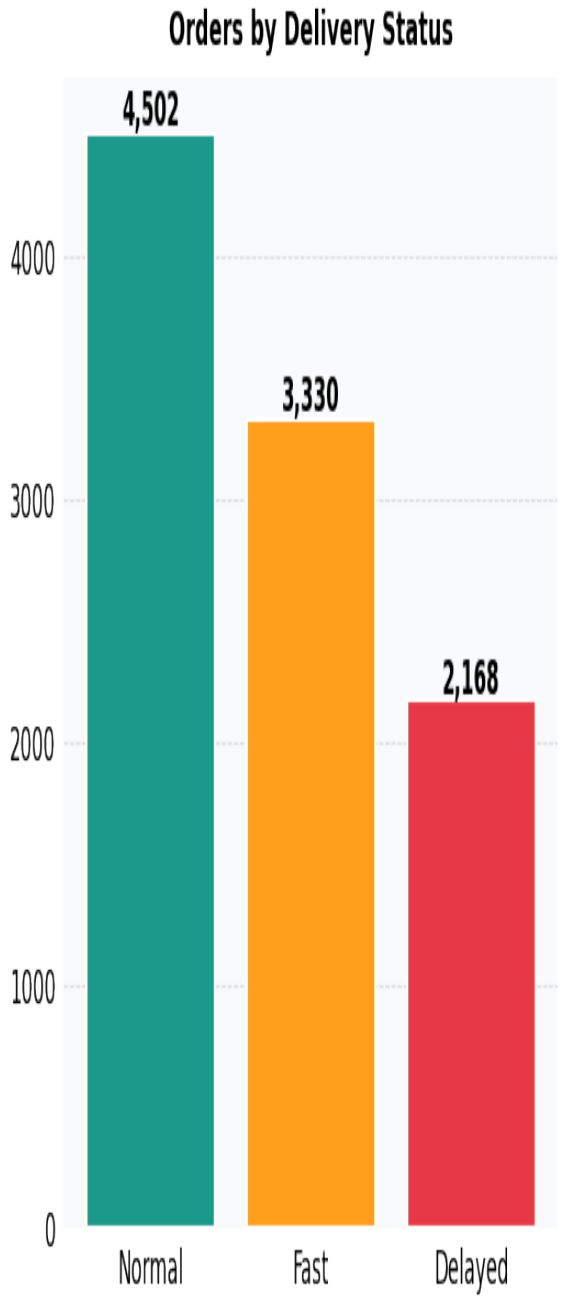
Low discount bands generate the highest net revenue ($199.5M), suggesting aggressive discounting does not necessarily drive more revenue. High discounts produced $152.6M — the lowest among active bands.

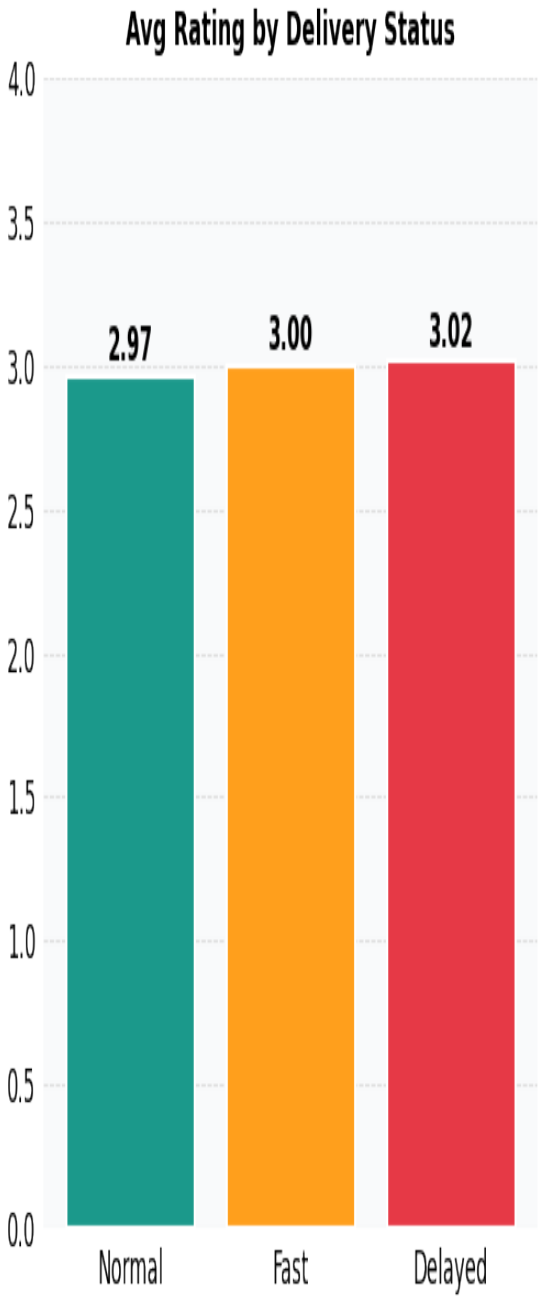


■ ***Insight:*** *Low discounts (0–10%) yield the highest net revenue at $199.5M (+31% vs High band). This suggests that deep discounting does NOT drive proportional volume gains and may be eroding margins unnecessarily.*

■ Delivery Performance & Customer Ratings

4,502 orders (45%) had Normal delivery status with the highest total ratings. Fast deliveries scored an average of 3.0 while Delayed orders scored the lowest at 3.02. The variation is minor — suggesting rating behavior is influenced by other factors.

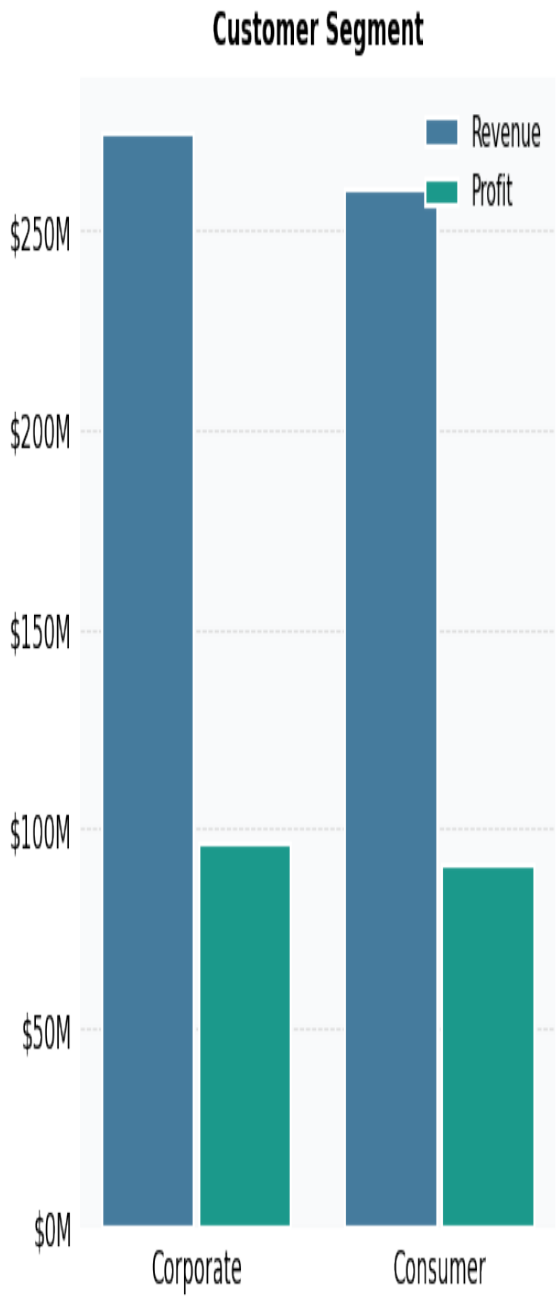


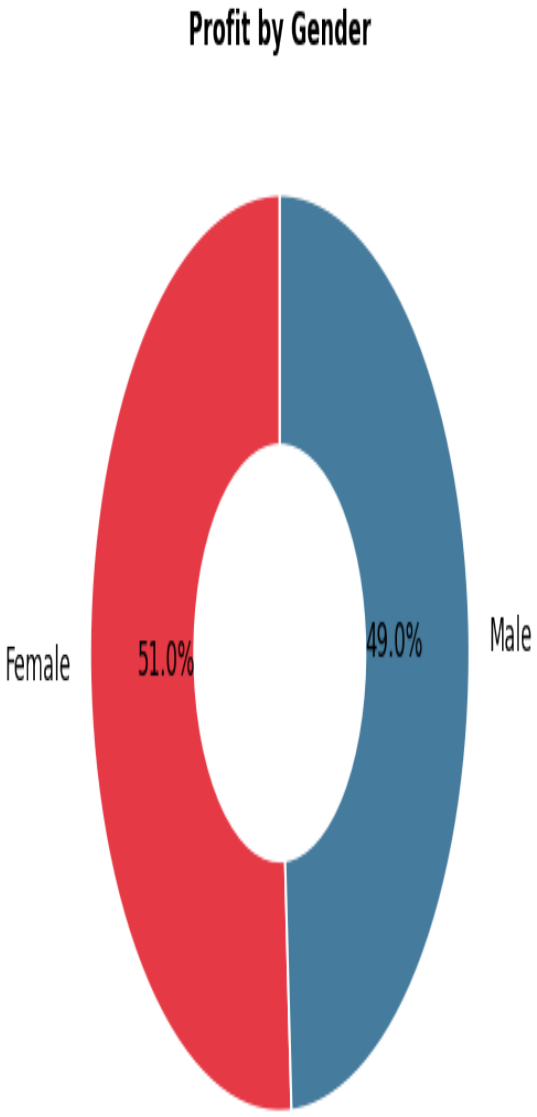


■ ***Insight:*** *Despite 21.68% of orders being delayed, average customer ratings remain similar across all delivery statuses (~3.0). This suggests customers may have pre-set low expectations, or delivery speed is not the primary driver of satisfaction.*

■ Customer Segment & Gender Analysis

Corporate customers contribute 51.2% of orders and 52.5% of net revenue ($274.2M), outperforming the Consumer segment. Female customers generate slightly higher net revenue ($272.5M) compared to Male customers ($261.9M).



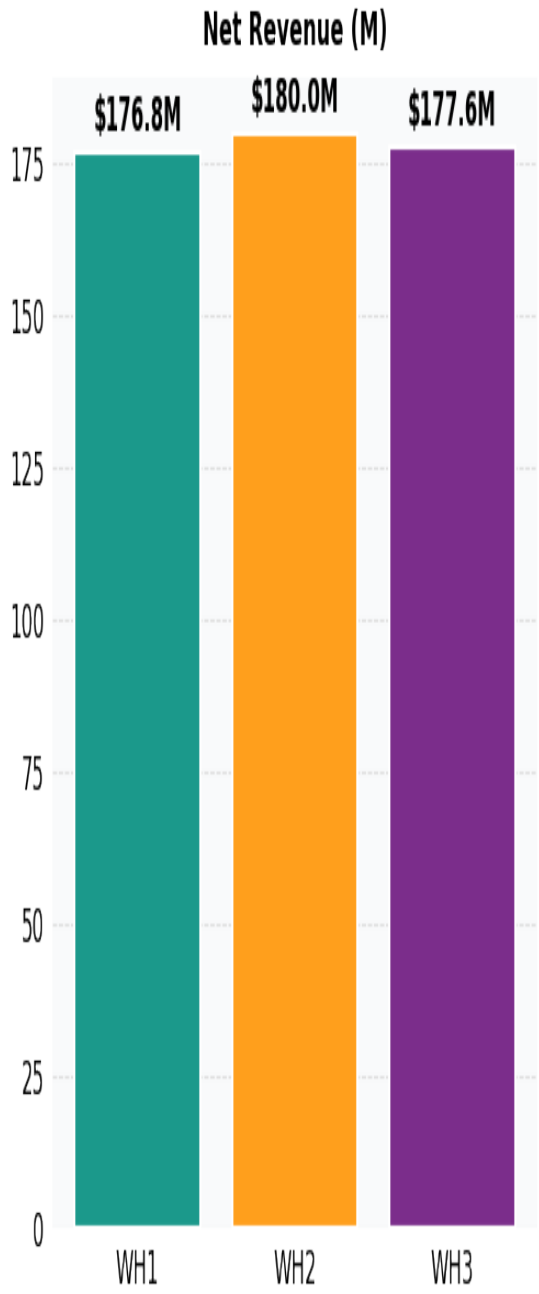


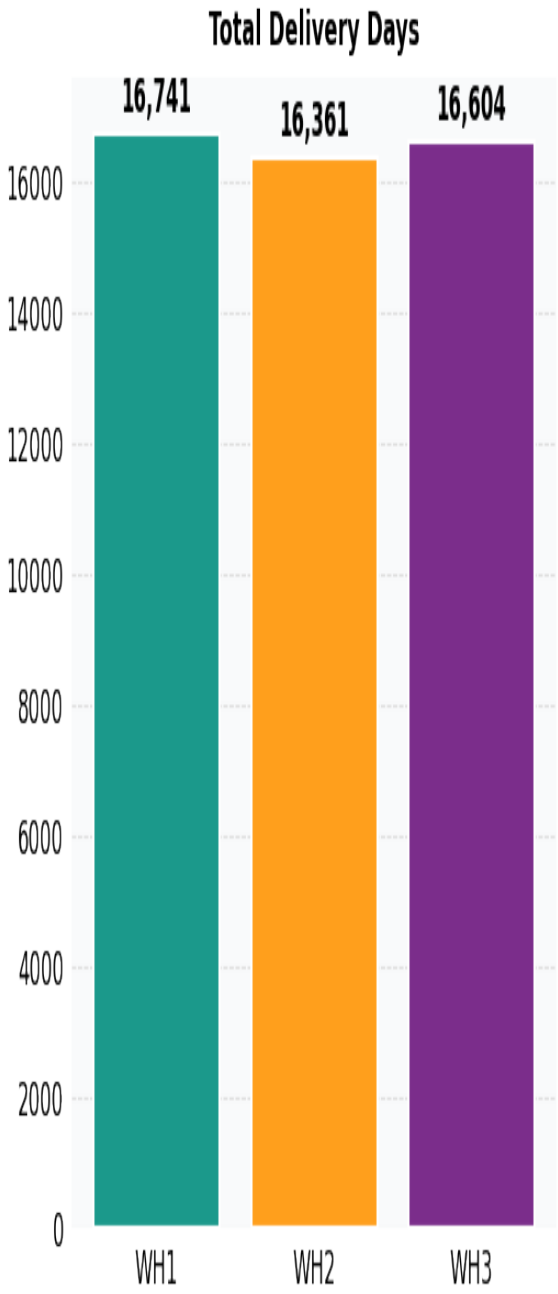
Segment	Orders	Net Revenue	Profit
Corporate	5,120	$274.2M	$95.9M
Consumer	4,880	$260.2M	$90.8M

■ ***Insight:*** *Corporate accounts are more profitable and should be prioritized with B2B loyalty programs. Female customers drive $10.6M more revenue than Male — targeted campaigns for female demographics could amplify this advantage.*

■ Warehouse Performance

WH2 leads in net revenue ($180M) and has the lowest cumulative delivery time (16,361 days), making it the most efficient warehouse. WH1 shows the highest total delivery time (16,741 days).





■ ***Insight:*** *WH2 is the highest-performing warehouse — both in revenue and delivery speed. Operational practices from WH2 should be studied and replicated in WH1 and WH3.*

■ Key Findings & Strategic Recommendations

01	**UK Tops Revenue** UK generated the highest revenue at $83.5M. Continued investment in UK logistics and marketing is recommended.
02	**Fashion is Most Profitable** Fashion leads profit at $48.1M (25.8% share). Expanding the fashion catalogue may yield strong returns.
03	**Low Discounts Outperform** The Low discount band yields $199.5M vs $152.6M for High discounts. Reduce high-discount promotions.
04	**WH2 is Best Performer** WH2 delivers fastest with highest revenue. Scale WH2 processes to other warehouses.
05	**Corporate Segment Priority** Corporate clients generate 52.5% of revenue. Build B2B account management programs.
06	**Stable Quarterly Profit** All quarters above $30M with minor Q4 dip. Investigate Q4 causes; plan holiday campaigns.
07	**UPI Payment Dominates** UPI leads with $180M and 3,393 orders. Ensure UPI reliability and expand UPI-specific offers.
08	**Delivery ≠ Rating Driver** Rating averages ~3.0 across all delivery types — investigate product quality & service as rating drivers.

■■ Methodology & Tools

Tool / Technique	Application
Microsoft Excel PivotTables	Aggregation of revenue, profit, units by multiple dimensions
PivotCharts	Visual representation of trends and comparisons
Slicers	Dynamic filtering by region, category, year, and segment
Conditional Formatting	Highlighting profit statuses and performance tiers
Excel Formulas	Profit Margin, Discount Amount, Net Revenue calculations
Pivot Return Analysis	Identifying return patterns by category and channel
